

SU-570

Apex-Alpha/Beta™ Operations

DESCRIPTION

This 2-day course focuses on the Apex-Alpha/Beta software setup, database interaction and automated sample processing operations utilizing a combination of lecture and practical examples for instruction. Approximately 50% of the class time will be allocated for hands-on exercises to help reinforce the concepts needed to count and report gross alpha and beta results. The training will cover the architecture of the Apex-Alpha/Beta software, installation, operational setups, calibrations, security, reports, QA, data review, and event logging. Discussions will also include supported modifications to the standard Apex-Alpha/Beta Stimulsoft reports.

HOW YOU WILL BENEFIT

Attendees who complete this course gain the knowledge to correctly prepare and use the software as it is designed. Supervisors and managers benefit from an improved level of software understanding on the part of their count room personnel resulting in a more efficient and defensible analytical process in the laboratory.

WHO SHOULD ATTEND

The class is intended for technicians and count room managers responsible for setup, processing, reporting and data review of alpha/beta samples.

COURSE CONTENT

- ✓ Apex-Alpha/Beta Software Description and Installation
- ✓ Basic and Advanced Operation
- ✓ Calibrations
- ✓ QC Checks
- ✓ Security
- ✓ Sample Counting
- ✓ Quality Control Charts and Setup
- ✓ Custom Report Generation and Modification
- ✓ Technical Support Options

PREREQUISITES

Basic familiarity with Microsoft Windows 2000/XP/7 operating systems as well as basic computer literacy is required.
